1. Introduction

The purpose of the Internal Capital Adequacy Assessment Process (ICAAP) is to determine the adequate level of capital to support Saxo Bank A/S' (hereafter "the Bank") and the Saxo Bank Group's (hereafter "the Group") current and expected future risks from the business strategy. This report is fulfilment of the disclosure requirement as according to the Danish Executive Order of 27 March 2014 on Calculation of Risk Exposures, Own Funds and Solvency Need and the Danish Financial Business Act for both the Bank and the Group.

The result of the ICAAP shown in this report is based on figures as of 30 September 2018.

The ICAAP determined Solvency Need for the Group amounted to DKK 1,536 million equal to 13.1% of the total Risk Exposure Amount (REA) with REA totalling DKK 11,692 million. The Group's Total capital amounted to DKK 3,379 million after inclusion of the total comprehensive income for the first nine months of 2018 in accordance with regulation. This gives the Group an excess capital of DKK 1,617 million including the combined buffer requirement of DKK 225 million. The Group's CET1 and Total capital ratios were 23.0% and 28.9%, respectively.

The ICAAP determined Solvency Need for the Bank amounted to DKK 1,491 million equal to 13.5% of the total Risk Exposure Amount (REA) with REA totalling DKK 11,079 million. The Bank's Total capital amounted to DKK 3,374 million after inclusion of the total comprehensive income for the first nine months of 2018 in accordance with regulation. This gives the Bank an excess capital of DKK 1,669 million including the combined buffer requirement of DKK 213 million. The Bank's CET1 and Total capital ratios were 24.2% and 30.5%, respectively.

The ICAAP Q3 2018 Report is a supplement to the Group's Risk Report 2017 and has been approved by the Board of Directors in the Group. The Risk Report contains detailed descriptions of the Group's risk and capital management and is available at www.home.saxo/about-us/investor-relations.

2. Capital Adequacy Assessment

The Group's primary capital adequacy assessment tool is the ICAAP; rooted in the Danish implementation of Capital Requirement Directive's (CRD IV), including "ICAAP guideline issued by DFSA" which has applied from October 2017, (Guideline number 9981 of 13/10/2017) and the Danish Financial Business Act.

The ICAAP assesses the Group's Solvency Need through three approaches: minimum capital requirement calculation (Pillar I) using the Danish implementation of the Capital Requirements Regulation (CRR), internal assessment of capital requirement (Pillar II) and capital requirement adequacy testing through internal models and stress testing (Pillar II). Pillar III contains the disclosure aspect and is covered by the Group's Risk Report 2017 and this ICAAP Report.

2.1 Internal Capital Adequacy Assessment Process

The Group's ICAAP process follows five steps:

- Step 1. Minimum capital requirement (Pillar I)
- Step 2. Internal assessment of whether additional capital requirements are needed above and over Pillar I using quantitative approaches and/or management judgement (Pillar II)
- Step 3. Capital requirement adequacy testing through stress testing and scenario analysis; if vulnerabilities, not covered in step 2 and 3, are found with sufficient plausibility and severity, an assessment is made whether an add-on (Pillar II) has to be made or addressed in the capital planning
- Step 4. Capital adequacy determination based on the three previous steps (Pillar II)
- Step 5. Disclosure (Pillar III)

A full ICAAP is performed as often as required, but at least once a year and reported to Danish FSA quarterly.

2.2 Business activities covered by the ICAAP

The primary business activity of the Group is facilitating online trading, investment and other investment services within capital markets to private, corporate institutional clients including white label clients. These activities are driven through Saxo Bank A/S and a number of subsidiaries.

The business activities involve different types of risk and concern different risk areas in the ICAAP as shown in the table below.

Activities/Risk categories	Credit Risk	Market Risk	Operational Risk	Business Risk	Liquidity Risk	Leverage Risk
Trading activities	√	√	√	√	√	√

The different risk types the Group is exposed to, have been examined and split into ICAAP risk categories as shown in the table below. Different methods are applied to assess the Group's capital need within each category.

Risk Types/Risk categories	Credit Risk	Market Risk	Operational Risk	Business Risk	Liquidity Risk	Leverage Risk
Earnings		√		√		
Credit growth						
Credit risk	√					
Market risk		√				
Concentration risk	√	√		√		
Group risks	√	√	√	√	√	√
Liquidity risk					√	
Leverage risk						√
Operational risk			√			
Control risk			√			
Settlement risk	√		√			
Strategic risk				√		
Reputational risk			√	√		
Non-trading interest rate risk		√				
External risk	√		√	√	√	√
Stress testing	√	√	√	√	√	

The Risk Report 2017, available at www.home.saxo/about-us/investor-relations, provides more details on each of the Risk categories.

2.3 Internal Assessed Capital Requirement

The internal set level of capital needed reflects the Group's assessment of its capital requirement. The purpose of the internal assessment is to identify and incorporate risks not covered by Pillar I or found to not being conservative enough.

Assessment is initiated by identifying the relevant risk-areas and exposures in the Group not covered by the minimum capital requirement. For each identified risk, it is assessed by the Group whether the risk is covered by Pillar I and, if so, whether it is sufficiently conservative. It is based on internal, quantitative approaches and, if relevant, internal expert input and management judgements.

Furthermore, the Group uses a number of combined stress scenarios, joining multiple events across risk categories in the scenario based approach. If the scenario based approach highlights a weakness in the self-assessed capital requirement then the solvency need is increased by an add-on. The scenario based stress tests are developed on the basis of the Group's risk register. One of the combined events entails a close to unlikely chain of events, in order to ensure the utmost degree of stress. Where applicable, the stress test takes insurance coverage into account.

Furthermore, the Group uses stress testing and internal models to test whether the capital requirement is conservative enough and ensuring that the assessed adequate capital level for the Group is sufficient to withstand unlikely, but not impossible, stress scenarios.

A number of stress scenarios have been outlined in the various single risk areas. Furthermore, a stress scenario has been implemented to create a very severe and highly unlikely stress-scenario. Where it is applicable, mitigating measures, like contingency plans and insurance coverage, are applied. The Group also conducts an income sensitivity analysis to ensure that business risks are covered adequately in the budgeted income.

The stress scenarios are updated and reviewed according to changes in the market and economic environment, and at least once a year.

2.4 Capital planning

Part of the ICAAP is planning future capital needs in relation to the business environment, growth and strategic plans in the years to come. Potential major changes to the risk profile, and thereby the future changes in capital requirements are estimated. These could be changes in the business strategy or competitive landscape, significant increases in traded volumes, fundamental changes in the market conditions, changes in the internal organisation, material changes in regulatory requirements or introductions of new products. This input is used in the strategic decision-making process by the Board of Management and the Board of Directors.

3. ICAAP Results Q3 2018

Internal solvency need assessment breakdown						
Risk Type (DKK millions)	Saxo Bank Group			Saxo Bank A/S		
	REA	ICAAP	ICAAP pct. of Total REA	REA	ICAAP	ICAAP pct. of Total REA
Credit risk	3,701	448	3.8%	5,031	555	5.0%
Market risk	2,892	532	4.6%	2,847	548	4.9%
Operational risk	5,100	556	4.8%	3,202	389	3.5%
Total solvency need	11,692	1,536	13.1%	11,079	1,491	13.5%
Combined buffers total		225	1.9%		213	1.9%
Total solvency need and buffer requirement		1,762	15.1%		1,704	15.4%
Capital composition						
Common Equity Tier 1 (CET1)		2,686	23.0%		2,681	24.2%
Tier 1		3,021	25.8%		3,016	27.2%
Total capital		3,379	28.9%		3,374	30.5%
Capital requirement buffer						
CET1 excess capital*		1,617	13.8%		1,669	15.1%
Tier 1 excess capital		1,493	12.8%		1,533	13.8%
Total capital excess capital		1,617	13.8%		1,669	15.1%

* Including effects of trigger capital used to fulfil Pillar II requirements

In July Saxo Bank sold its stake in Saxo Payments, and the transaction was closed in October 2018, hence is not included in the figures above. The effects on the regulatory capital from the transaction amounts to a CET1 and Total Capital increase of DKK 802m.

The combined buffer consists of the capital conservation buffer of 1.875% of REA and the countercyclical capital buffer of country-specific buffer-rates.

The current guidelines from Danish FSA allow the Group to use excess trigger capital, (Additional Tier 1 capital with trigger and Tier 2 capital with trigger not used to cover the minimum requirements), to cover a part of the Pillar II add-on requirement. The effect is shown in the graph.

Additional information on the Group's capital management, the regulatory landscape and more, is disclosed in the Risk Report 2017 available at www.home.saxo/about-us/investor-relations.
